

Antenna Hosting

We offer antenna hosting services in the southern hemisphere, 40 minutes drive from Johannesburg International Airport in South Africa. The site is ideally co-located at the *Pinkmatter* head office to ensure smart hands support.

- 25°51'30"S & 28°27'10"E
- Altitude 1 350 m
- Excellent horizon mask
- Antenna pads constructed as per your specifications
- Secure facilities with patrolling guards & CCTV
- Administrative support to obtain Spectrum and Type Approval regulatory licencing
- Forwarding & clearing logistics
- Project management from the establishment to operation

The site is ideally located in a quiet area outside Pretoria. The low-density area ensures low RF interference.

Pinkmatter specialises in ground segment software systems. *FarEarth Ground Segments* provides a full ground station solution to the hosting customer.

Hosting site

- High-speed internet
- Backup power
- Secure site
- Compliant with regulations

Services

- Licencing support
- Import logistics
- Project management
- Administrative & technical support

pinkmatter

ANTENNA HOSTING

Pretoria's weather conditions are ideal, with moderate temperatures, low winds, and zero snowfall. Most locations on the hosting site provide a 5-degree horizon mask or better.

Existing and scalable backup power infrastructure, including solar, UPS, and a generator, provides independence from the national grid. High-speed internet is available.
